The effect of extracellular matrix on the growth properties of human carcinoma cells. The influence of substrate (fibronectin, laminin, matrix, and collagen I) on the growth characteristics of 5K-OV-3 human carcinoma cells was examined. Cells were seeded in serum-containing medium in the presence of the substrata. Cell survival was measured using MTT-formazan reduction as an index of cell number. The proliferation rate, expressed as the percentage of growth observed in serum-containing medium, was inversely related to the amount of substrate present. Tumour cells in collagen I had the highest survival rate (92 +/- 10%) and proliferative capacity (100 +/- 12%) when compared to cells grown on other substrata. When the substratum was changed from collagen to fibronectin the proliferation rate decreased only by about 20%. These findings suggest that human carcinoma cells are dependent on a particular matrix for growth. The outcome of any therapy, particularly in combination with radiotherapy, is likely to be dependent on the type of extracellular matrix present and, therefore, the time this information is available.Q: Merging two arrays with same keys -in an eloquent way- I have two arrays like the following : \$array1 = array(array(key => '0.3', value => '0.1'), array(key => '0.8', value => '0.2'), array(key => '0.3', value => '0.1'), array(key => '1.4', value => '0.2'), array(key => '1.5', value => '0.2'), array(key => '1.8', value => '0.2'), array(key => '2.3', value => '0.2'), array(key => '2.5', value => '0.2'), array(key => '2.6', value => '0.2'), array(key => '2.7', value => '0.2')); \$array2 = array(array(key => '2.1', value => '0.1'), array(key => '2.3',

Q: Remove "Font Size" from Button I have a complicated button style in the master page, styles.css looks like this: .aspButton.Default { background-image: url("~/Images/Styles/btDefault.png"); background-repeat: no-repeat; background-position: left top; border: none; padding: 0; } .aspButton.Default.aspButtonText { cursor: pointer; } .aspButton.Default.aspButtonText.Default { color: #FFF; font-weight: normal; font-size: 16px; font-family: Arial,Helvetica,sans-serif; padding: 0 12px 0 0; text-shadow: 0 1px 0 #7C7; } .aspButton.Default:hover { background-image: url("~/Images/Styles/btDefault.png"); background-repeat: no-repeat; background-position: left top; border: none; padding: 0 0 2px 2px; } .aspButton.Default:active { background-image: url("~/Images/Styles/btDefault.png"); background-repeat: no-repeat; background-position: left top; border: none; padding: 0; } The default font size on most buttons is small, but on others it's large. I'm looking for a way to remove the "Font Size" property on buttons that will not break the code. I've tried setting the property to none, but it does not work. I've looked at other ways to remove the font size, but they don't work well with the border and gradient. I've also looked at JavaScript hacks, but they tend to add odd artifacts to the image and cause other problem. Is there a simple css only way to do this? A: You can use the no-round button feature, on MSDN .asp

System Requirements:

Windows 7, 8, or 8.1 1 GHz or faster processor 512 MB RAM 500 MB hard drive DirectX 9.0c Battlefield 3 is also available for Mac users (with a few limitations) via Origin. What's new in Battlefield 3? The biggest change is the switch to the Frostbite 2.0 game engine. A Frostbite engine game is like a rendering engine, allowing developers to create large-scale worlds and dynamic game worlds with complex environments with no problem. The Frostbite 2
